Describe your proposed water system (include type and size of devices used to divert or withdraw water from source): An intake structure is planned to be prefabricated and placed in the bank of the Napeequa River. The intake will use a fixed, sloped screen with an air or water backwash system to flush debris off the screen face and will meet agency screen criteria for sweeping flow, approach velocity and mesh size. Pipe (800 ft.) would be buried from the intake to an existing side channel. It would include a large, below grade, sand trap near the intake and several manholes for maintenance. The existing culvert outlet may be adequate to return flow to the Napeequa with the addition of dam boards for elevation control on the culvert inlet.
